

✅ 1. Frontend using Next.js (React + TypeScript recommended)

🎯 Objective:

Build a web UI for users to interact with the MFAMS backend – login, view funds, buy/sell, track portfolio.

🧩 Modules & Pages:

🔒 User Onboarding & Authentication

Pages:

/register

/login

/dashboard

Features:

Register/Login with JWT token storage in cookies

User profile page (/me)

📊 Portfolio Tracking

Pages:

/portfolio

Features:

Table with fund name, total units, current NAV, current value

Summary at the top

📄 Reports

Pages:

/reports/transactions

/reports/capital-gains (Bonus)

Features:

Filter by month

Capital gains chart (if available)

🔧 Tools & Stack:

Next.js, TypeScript, Tailwind CSS

axios or fetch for API calls

react-hook-form + zod for form validation

next-auth (if needed for JWT support)

Context API or Redux for auth state

✅ 2. Mobile App using Capacitor + Android

🎯 Objective:

Create a hybrid Android app with Capacitor (React or Ionic UI) for mutual fund management.

🧩 Screens & Features:

🔒 Authentication

Login/Register screens

Store JWT token securely (use Capacitor Storage plugin)

📊 Portfolio

View fund-wise holding

NAV and current value shown

📄 Reports

Dropdown for month → Fetch transaction summary

Export as PDF (optional using Capacitor plugin)

⚙️ Tools:

Capacitor + React or Capacitor + Ionic (Angular or React)

axios for API

@capacitor/storage for token storage

@capacitor/android for Android packaging

📁 Bonus: Shared API Contract (OpenAPI / Swagger)

Backend provides Swagger docs.

Frontend can use Swagger-generated types or axios client (openapi-typescript-codegen).
